

BYOx Guest

Connecting to BYOx with a Guest Account v2.0

BYOx Guest

Connecting with a Guest account

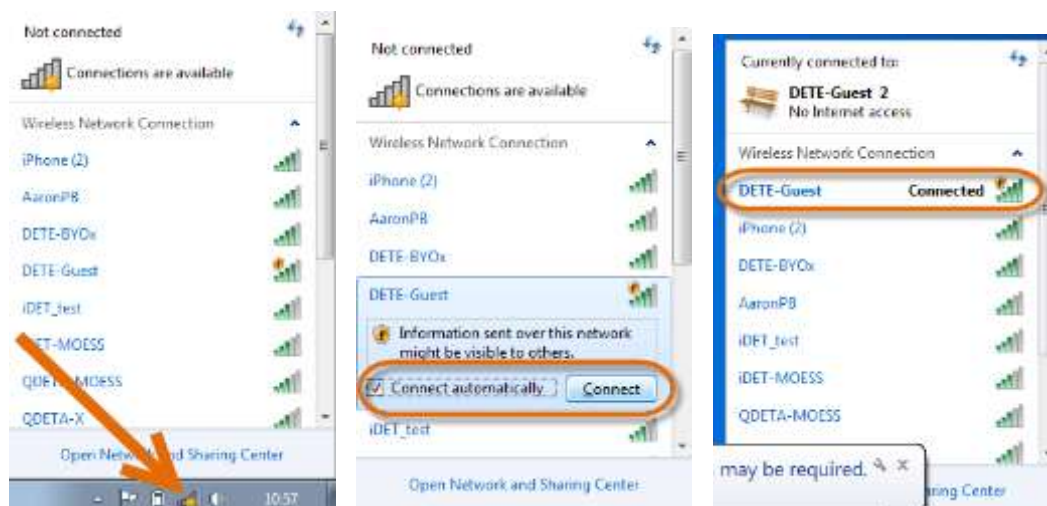

This process outlines how a Guest account for a non-DET identity (i.e. a contractor onsite) can connect to the BYOx network.

Prerequisites

- **Must** have an account created by a BYOx sponsor.
- **Must** be provided with the account details by the BYOx sponsor.

Connecting to BYOx network as a Guest

1. Click the wireless icon in taskbar. Open Network and Sharing Center. Select 'DETE-Guest' and tick "Connect automatically". Click "Connect" button. Wait till connection is successful.

(What this would look like on a Windows device, different devices may vary).

2. Open a browser and attempt to navigate to a non-https site (i.e. <http://www.news.com.au>).

3. You will be redirected to a BYOx login page.

4. Enter the credentials provided to you by your BYOx Sponsor, Read and accept the 'Acceptable Use Policy'. Then click "Sign On" to login.

5. Tap “Continue”

6. You receive notification you have been successfully connected to the BYOx network.

7. You can now navigate to internet sites successfully, without being redirected to the BYOx Guest login site.

!!! Attention !!!

Your internet access is filtered via DET web filtering services. Your internet use on the BYOx network is logged and stored to enable internet use auditing.
